

3J DRIVELINE 2000E/BULLET STRAIGHT-CUT SYNCHRO KIT

Important information when fitting the 3J 2000E/Bullet kit in to, your standard gearbox.

- All build should be carried out by an experienced technician.
- - The kit is supplied with x 6 Heavy duty External circlips. Fit 2 of the circlips in each of the 3 relevant Circlip grooves on the main shaft.
- The kit is best run with the 3J reverse idler gear; if not the OD on the teeth of the standard gear will need to be machined down to 51.40mm. Alternatively purchase our custom designed reverse idler gear.
- The input shaft runs on a non-standard heavy duty spigot caged needle roller bearing (supplied in the kit). All main shaft gear run on supplied caged needle roller bearings.
